

## How To Create API Application

Before you begin your API testing, you must first create an application on the API Business Hub portal to obtain the API Key. The following are steps to create your API application.

1. Ensure you can view the APIs which you have requested access for. In this example, you have access to the Warehouse APIs.

2. Click My **Workspace** > **Applications** > **Create New Application**.

3. On the **Create New Application** window, fill in the details under **Application info**.

Your API application is created with an Application Key (API Key). Keep this key securely and do not share it to anyone. This will be required to consume the API.
